

## Question - 1

### Automation test of career page

# Welcome to the WorldRemit QA/Test Engineer Hiring Task!

## Initial notes

### Please be advised that:

- The task should take you up to 4 hours of work
- You can complete the task using your favorite IDE. Just remember to upload the code before the deadline
- You can use any technology

## Requirements

1. The task is to write automation test, using any technology that will cover the following scenario:

```
Scenario: As a user, I would like to apply for a
given position
  Given: I enter
https://www.worldremit.com/en/careers
  Then: I go to open position form
  And: I select a department Engineering IT
  And: I select an office as Other
  And: I find a position for QA
  And: I open QA position
  And: I fill in an application form without a
resume
  When: I click on apply now
  Then: Validation error 'Please attach a
resume' is displayed
```

2. Please suggest (but do not implement) other tests that will verify the career page - in a similar format as the scenario above.

## Task Evaluation Criteria

A working test would not be enough, because in this task you should focus mostly on the way the code is written.

Additionally, the solution will be evaluated, taken into account the following:

- simplicity and readability of the code
- usage of SOLID and similar principles
- design of modules, classes, methods etc.
- problem-solving approach
- creativity

Good luck and enjoy!
